

Copper Coil RFQ Worksheet

Use this worksheet to organize an enquiry. Open requirements should remain identified as open; this is not a JHCOILS performance specification.

Project

Part reference and drawing revision; equipment function; sample quantity; expected production quantity; requested destination and timing.

Winding and connections

Finished dimensions and clearances; conductor reference; insulation; turns and sections; core or support; lead exits, free lengths and preparation.

Electrical and acceptance requirements

Target properties and tolerances; frequency and excitation; relevant current or bias; operating duty; thermal conditions; proposed measurement and sample evaluation.

Supply scope

Winding only or additional assembly; supporting parts; required records and packaging. Attach available drawings, photographs or test records separately.
